

100% tracking

Area of application

Documenting picked orders is a challenge facing all our customers. There must be proof that an article has been shipped and handling any customer complaints should be quick and straightforward.

The ivii solution: The **ivii.photostation** logs every order with a photograph before shipping.

Function

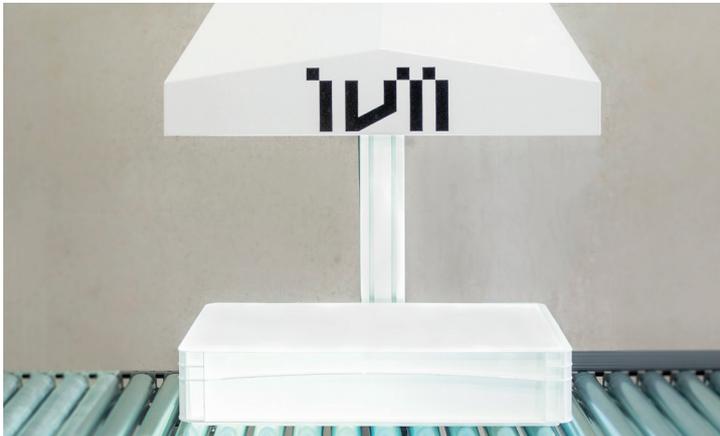

The **ivii.photostation** is an optical imaging system that can be easily integrated into the existing work process.

The **ivii.photostation** can be used in various ways along the conveyor system wherever you need to track something. Usually, it is used before the delivery is shipped to the customer.

The **ivii.photostation** photographs the load carriers (cartons or plastic containers) on the conveyor system. This image data is given a time stamp and transmitted to your FTP server along with the container code.

Result

- The ivii.smartcam takes pictures of the load carrier's content
- Time stamps and routing labels uniquely identify the captured images.
- Shorter processing time for complaints
- Lower complaint costs through traceability

Technical details

Space required	1200 × 1200 × 1140–2040 mm (L × B × H)
Weight	approx. 50 kg Shipped on EUR-pallet
Voltage	24 V _{DC}
Interface	Gigabit Ethernet
Gap width	Min. 210 mm
Conveyor system	Maximal 0.8 m/s Upper edge 300–1000 mm Nominal width 270–450 mm
Load carriers	Length 250–650 mm Width 180–430 mm Height 50–310 mm
Image format	BMP (approx. 1.3 MByte/shot) or JPG (approx. 140 KByte/shot)
Throughput	1600 load carriers/hour

The network memory is not included in the scope of supply of the ivii.photostation.

About ivii

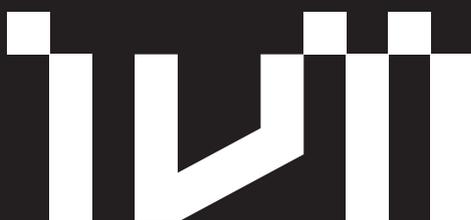

ivii gmbh was founded in 2016 as a 100 % subsidiary of KNAPP AG.

As a dynamic, independent company, we are conquering the market for quality assurance with intelligent image processing, backed by the stability of the globally active group.
